Little Explorers · Class 25

My Talking Pet in Scratch

A pet that eats, plays and talks!

Pet needs | Reacting | Talking

Did you know?
Some video game pets get hungry and sleepy, just like real ones, because programmers coded their needs!

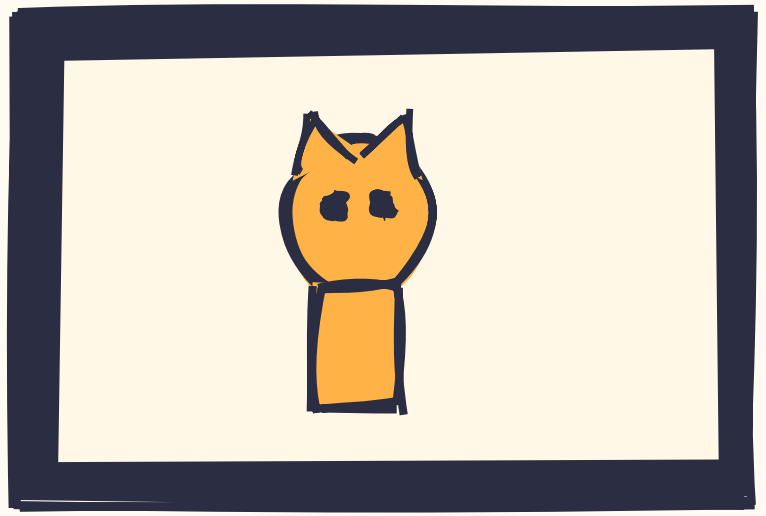

LEARN

Let's wonder...

Can a pet live in a computer?

A digital pet

Real pets need food, water and love. What if we made a pet inside the computer that could eat, play and even **talk** in your voice?

Impossible!

Only in games?

Let's code one!

Today: you code a **talking pet** in Scratch that reacts when you click it and press keys.

LEARN

Learning objectives

Today I can...

1	**Pet needs:** say what a pet **needs**: food, water, play, sleep	**Proof:** I named 3 things a pet needs
2	**Pet reacts:** make my Scratch pet **react** when I click it or press a key	**Proof:** my pet talks when I click it
3	**Pet talks:** **record my voice** so my pet can talk	**Proof:** my pet says something in my voice

LEARN

Objective 1 · Pet needs · video

Video time!

How to Take Care of Pets

Explore Planet English · about 4 minutes · youtu.be/x2X4vRUb_y0

Watch for...

1. What do pets **need** every day?
2. How do we know if a pet is happy?
3. Which pet would you like?

Scan to watch

After the video: Our pet today lives in the computer! What will it need?

Objective 1 · Pet needs

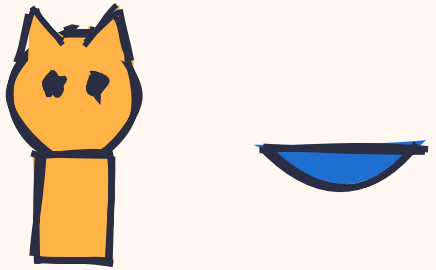

What do pets need?

The idea

Every pet needs: **food**, **water**, **play**, **sleep** and **love**.

Our computer pet will show it needs these things. When we give food, it will be happy!

Example: a baby

A baby cries when it's hungry or tired. Grown-ups figure out what it needs. Our pet will 'tell' us what it needs too!

Objective 2 · Pet reacts

When this happens, do that

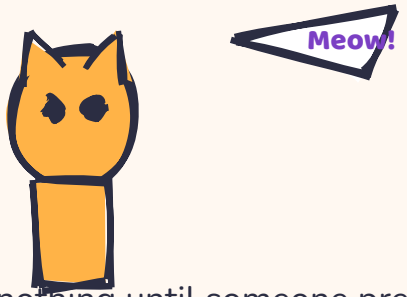

The idea

In Scratch, yellow **event** blocks start code:

- **when this sprite clicked** → say 'Meow!'
- **when space key pressed** → eat food
- **when green flag clicked** → start the game

The pet waits until something happens, then reacts!

Example: a doorbell

A doorbell does nothing until someone presses it. Then it rings! Event blocks wait the same way.

Objective 3 · Pet talks

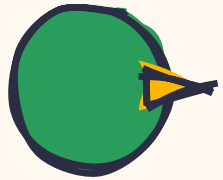

Record your own voice

The idea

Click the **Sounds** tab, then the **microphone**. Press record and say something!

Now your pet can say **'I love you!'** or **'I'm hungry!'** in your voice.

Example: a parrot

Hello!

A parrot copies the sounds it hears. Our pet copies the sound we record!

Real world

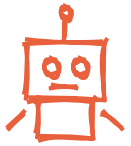

Computers that talk and listen

Voice assistants
Answer when you ask a question

Game pets
Need feeding and play

Robot pets
Wag tails and make sounds

Real pets
Still need real love!

? Would you rather have a computer pet or a real pet? Why?

Remember
Computer pets are fun, but real animals need real care every day.

Part 2 · Make it

Now let's put it to work!

You know the ideas. Time to play, build and test. Use these slides while you work:

1. Pet and owner
2. Choose your pet
3. Snap the picture blocks
4. Make your pet talk
5. Pet challenges

Class game

Pet and owner

How to play

1. One child is the **pet**. One is the **owner**.
2. The pet acts out a need: rubbing tummy (hungry), yawning (tired), bouncing (wants to play).
3. The owner guesses and gives the right care.
4. Swap!

Then discuss

How did the owner know what the pet needed?

Big idea

Pets show their needs with actions. Our computer pet will show them with code.

MAKE

Objective 2 · Build step 1 of 2

Choose your pet

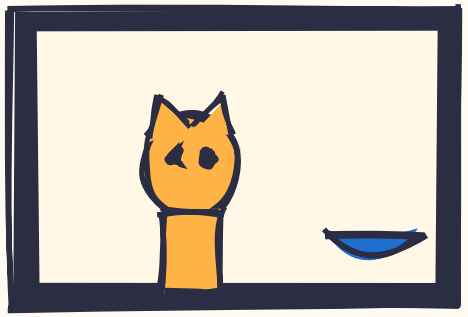

a Open **Scratch** (teacher's class account).

b Click **Choose a Sprite**: pick a cat, dog, or dragon!

c Choose a **backdrop**: a garden or a bedroom.

d Add a **food bowl** sprite too.

e Give your pet a name!

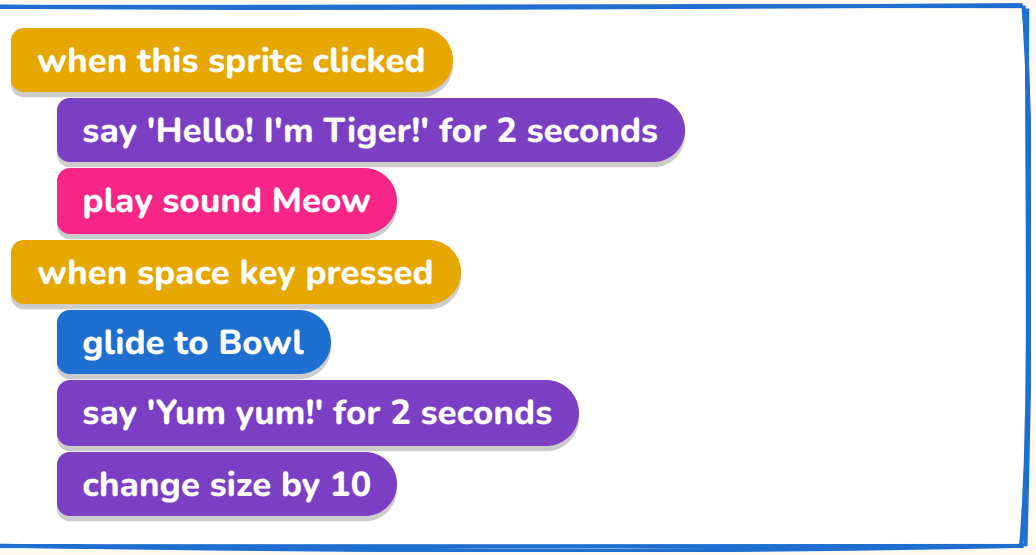

Check: Your pet and its bowl are on the stage.

MAKE

Time to build!

Snap the picture blocks

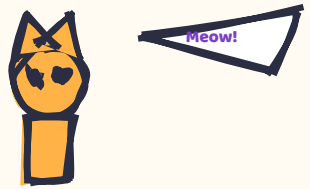

Read it like a story

Click the pet: it says hello.

Press **space**: it runs to the bowl and eats!

It grows a bit bigger!

Try it

Click the cat. Then press space!

MAKE

Objective 3 · Build step 2 of 2

Make your pet talk

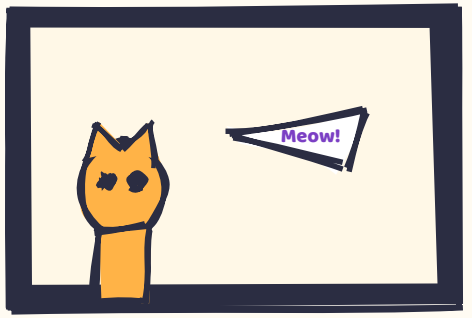

a Click the **Sounds** tab.

b Click the microphone: **Record**.

c Say 'I'm hungry!' (or anything kind).

d Go back to Code. Use **play sound** with your recording.

e Add a key that plays it: **when h key pressed**.

Check: Your pet talks in your voice!

Only record nice words. Your pet is friendly!

MAKE

Level up!

Pet challenges

Choose your challenge

Play time: press p: the pet jumps and spins.

Sleepy: press s: the pet says 'Zzz' and gets smaller.

Mood colour: change colour when it's happy.

Two pets: add a friend for your pet.

Think like an engineer

How does the pet know when to eat?

Boss level

Make a hungry counter that goes down every few seconds!

Objective check

Can I really do it? Prove it.

01	Name 3 things a pet needs.	○ ○ ○
02	Click your pet. What does it do?	○ ○ ○
03	Play the sound you recorded.	○ ○ ○

Rate yourself

Colour one circle each. Red: not yet. Amber: with help. Green: I can explain it to a friend.

Teacher: Pet show: visit 3 friends' pets and feed them!

Show what you know

What did we learn?

- [x] Pets need food, water, play, sleep and love
- [x] Event blocks: when this happens, do that
- [x] We can record our own voice
- [x] Our pet reacts to clicks and keys

At home

Tell your family about your computer pet and its name!

Next class: Pixel Messages!

Exit ticket: what does 'when this sprite clicked' do?
